

## ABSTRACT

A driver's cab for a utility vehicle includes a preassemblable door module on at least one side of the vehicle, the door module including a door frame and a door mounted on the door frame; and a supporting structure on which the door is arranged. The supporting structure is prepared for the mounting of the door module. In the mounted state, the door frame is secured on the supporting structure. A driver's cab series, which has a driver's cab for a low-platform vehicle and a driver's cab for a high-platform vehicle, includes a plurality of drivers' cabs having structurally identical supporting structures. At least the driver's cab of the low-platform vehicle includes at least one door module which has a door frame secured on the supporting structure and a vehicle door fastened to the door frame.
